In your hands you hold something more than a **programming book**, **textbook**, or **tutorial**. This modern teaching resource guides you through the **first steps in programming** using a little text and many code examples with explanations, combined with carefully selected **practical problems** and a **judge system** for immediate **automatic code evaluation**.

The teaching content was designed personally by **Svetlin Nakov**, who has helped more than **150 000 beginners** in the last 20 years to **start coding** and start learning the **software engineering profession**.

Svetlin Nakov is known for his **inspiration** and ability to teach programming skills gradually, using **small learning units**, full of real-world examples and **practical problem solving**.

Remember that **programming skills** can only be learned through a lot of **code writing** and a lot of **practical problem solving**, not through reading books and watching videos, so be sure that you solve the exercises in each book section. Good luck!
